Acrycoat is a ready-to-use, grain-textured exterior wall coating based on acrylic copolymer binder. It is a decorative plaster that allows for linear or wavy patterns, while also effectively covering surface imperfections. It is resistant to outdoor weather conditions. Thanks to its water-based structure, it is odorless and breathable. Acrycoat is applied with a steel trowel, and patterns can be created using a plastic trowel. It provides excellent performance on properly prepared concrete, panel, and cement-plastered interior and exterior surfaces. It is safe for both human health and the environment.

Silkoterasit is a ready-to-use, grain-textured exterior wall coating based on acrylic copolymer binder. It offers decorative linear or wavy patterns and effectively conceals surface defects. It is highly resistant to outdoor weather conditions. The water-based formula ensures it is odorless and breathable. Silkoterasit is applied with a steel trowel, and textures can be created using a plastic trowel. It performs excellently on properly prepared concrete, board, and cement-plastered interior and exterior surfaces. It is environmentally friendly and safe for human health.
